AP CALCULUS AB

Unit 1 • Lesson 1.10 practice

Lesson 1.10 • Exploring Types of Discontinuities

4 multiple-choice questions and 1 free-response question

The graph of f: a line segment for $-3 \le x < -1$, $y = x^2$ for $-1 \le x < 2$, a line segment for $2 < x \le 4$; $f(-1) = 1$, $f(2) = 1$.

Question 1

What type of discontinuity does $f(x) = \dfrac{x^2 - 1}{x - 1}$ have at $x = 1$?

(A) Jump
(B) Infinite
(C) Removable
(D) None

Question 2

$\lim\limits_{x \to 0^-} g(x) = 1$ and $\lim\limits_{x \to 0^+} g(x) = 4$. What type of discontinuity does g have at $x = 0$?

(A) Jump
(B) Removable
(C) Infinite
(D) None

Question 3

What type of discontinuity does $h(x) = \dfrac{1}{x - 2}$ have at $x = 2$?

(A) Removable
(B) Infinite
(C) Jump
(D) None

Question 4

For the function f graphed above, which describes its discontinuities at $x = -1$ and $x = 2$?

(A) Both removable
(B) Both jumps
(C) Removable at -1, jump at 2
(D) Jump at -1, removable at 2

Question 5 (Free response)

Let $g(x) = \begin{cases} x^2, & x < 0 \\ x + 1, & 0 \le x \le 2 \\ \dfrac{1}{x - 3}, & x > 2. \end{cases}$

(a) Find the one-sided limits of g at $x = 0$ and classify the discontinuity.
(b) Find the one-sided limits of g at $x = 2$ and classify the discontinuity.
(c) Classify the discontinuity at $x = 3$. Justify with limits.
