AP PRECALCULUS

Unit 1 • Lesson 1.2 practice

Lesson 1.2 • Rates of Change

4 multiple-choice questions and 1 free-response question

Question 1

What is the average rate of change of $f(x) = 2x^2 - 3$ on $[1, 4]$?

(A) 10

(B) 15

(C) 30

(D) 8

Question 2

What is the slope of the secant line to $f(x) = x^3$ through the points where $x = -1$ and $x = 3$?

(A) $\frac{26}{4}$

(B) 7

(C) 9

(D) 28

Question 3

$V(t)$ is the volume of water in a tank, in liters, t minutes after it starts filling. What are the units of the average rate of change of V?

(A) Minutes per liter

(B) Liters

(C) Liters per minute

(D) Liters times minutes

Question 4

Using the interval $[2,\ 2.001]$, which is the best estimate of the rate of change of $f(x) = x^2 + x$ at $x = 2$?

(A) 4

(B) 6

(C) 2.5

(D) 5

Question 5 (Free response)

The position of a cart, in meters, is $s(t) = t^2 - 4t + 10$ for $0 \le t \le 6$ seconds.

(a) Find the average velocity (average rate of change of s) on $[0, 4]$. What does your answer mean about the cart?

(b) Find the average velocity on $[4, 6]$, with units.

(c) Use the interval $[1,\ 1.01]$ to decide whether the position is increasing or decreasing at $t = 1$.
